| Overseas Part Number     | SP3232EEN |
| ▶ Equivalent Part Number | SP3232EEN |

# 3.0V TO 5.5V LOW POWER MULTICHANNEL RS-232 LINE TRANSCEIVERS USING FOR 0.1 µF EXTERNAL CAPACITORS

#### **DESCRIPTION**

The SP3232EEN has two receivers and two drivers, and a dual charge-pump circuit. The device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 3.0V to 5.5V supply. The device operates at data signaling rates up to 250kbit/s and a maximum of 35V/µs driver output slew rate.

#### **FEATURES**

- \* Exceeds ±8KV ESD Protection(HBM) for RS-232 I/O Pins
- \* Meets the Requirements of TIA/EIA-232-F and ITU V.28 Standards
- \* Operates With 3.0V to 5.5V V<sub>CC</sub> Supply
- \* Operates Up To 250kbit/s Data Rate
- \* Two Drivers and Two Receivers
- \* External Capacitors 4×0.1µF
- \* Accepts 5.0V Logic Input With 3.3V Supply

#### **PIN CONFIGURATION**

#### **PIN DESCRIPTION**

| PIN NO. | PIN NAME        | DESCRIPTION  |  |  |  |
|---------|-----------------|--|--|--|--|
| 1       | C1+             | Positive Terminal of Voltage-Doubler Charge-Pump Capacitor |  |  |  |
| 2       | V+              | -5.5V Generated by the Charge Pump                         |  |  |  |
| 3       | C1-             | Negative Terminal of Voltage-Doubler Charge-Pump Capacitor |  |  |  |
| 4       | C2+             | Positive Terminal of Inverting Charge-Pump Capacitor       |  |  |  |
| 5       | C2-             | Negative Terminal of Inverting Charge-Pump Capacitor       |  |  |  |
| 6       | V-              | -5.5V Generated by the Charge Pump                         |  |  |  |
| 7       | DOUT2           | RS-232 Driver Outputs                                      |  |  |  |

- 4. Pulse skew is defined as |tplh-tphl| of each channel of the same device.

#### **TYPICAL APPLICATION CIRCUIT**

Notes: 1. C3 can be connected to  $V_{\text{CC}}$  or GND. 2. Resistor values shown are nominal. 3. NC: No internal connection.

- 4. Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should be connected as shown.

# Disclaimer

EVVOSEMI ("EVVO") reserves the right to make corrections, enhancements, improvements, and other changes to its products and services at any time, and to discontinue any product or service without notice.

EVVO warrants the performance of its hardware products to the specifications applicable at the time of sale in accordance with its standard warranty. Testing and other quality control techniques are used as deemed necessary by EVVO to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

Customers should obtain and confirm the latest product information and specifications before final design, purchase, or use. EVVO makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does EVVO assume any liability for application assistance or customer product design. EVVO does not warrant or accept any liability for products that are purchased or used for any unintended or unauthorized application.

EVVO products are not authorized for use as critical components in life support devices or systems without the express written approval of EVVOSEMI.

The EVVO logo and EVVOSEMI are trademarks of EVVOSEMI or its subsidiaries in relevant jurisdictions. EVVO reserves the right to make changes without further notice to any products herein.
